Abstract (en)
The disclosure relates to a database configuration parameter processing method and apparatus, a computer device, and a storage medium. The method includes: obtaining a current configuration parameter; determining a current database state indicator value corresponding to the current configuration parameter; generating parameter adjustment data through a parameter adjustment model according to the current database state indicator value; adjusting the current configuration parameter according to the parameter adjustment data, to obtain a new configuration parameter; using the new configuration parameter as a current configuration parameter, and returning to the determining a current database state indicator value corresponding to the current configuration parameter to continue execution until an adjustment termination condition is met, to obtain a recommended configuration parameter.
