Abstract (en)  
[origin: WO2019145029A1] The invention relates to a device and a method for dissociating tissue. In one embodiment, the device comprises at least one dissociation unit for receiving a tissue sample, which is arranged at least partially in a pot-shaped cell sieve. The invention also relates in an embodiment to a device and a method for dissociating tissue, wherein the tissue is dissociated by means of a grinding mechanism having rows of teeth which can be moved relative to one another and which, when moving past one another in the one direction, cut the tissue and, when moving past one another in the opposite direction, grind the tissue.
