Abstract (en)
[origin: CN112006600A] A vacuum cleaner nozzle (2) comprises a bottom plate, at least one brush (13.1, 13.2, 13.3) and a brush driving mechanism, the brush driving mechanism comprises a handle (15) and is configured to lower at least one brush (13.1, 13.2, 13.3) and arrange in a lowered position when the handle (15) is moved to a first handle position, and raise the at least one brush (13.1, 13.2, 13.3) and arrange at the raised position when the handle (15) is moved to a second handle position, the brush driving mechanism further comprises a handle transposition system (16) and a locking device (26). The handle transposition system (16) is configured to hold the handle (15) in at least a first handle position and a second handle position, and the locking device (26) is configured to lock the at least one brush(13.1, 13.2, 13.3) in a lowered position.
