Abstract (en)
[origin: EP3744488A1] A razor cartridge (20) comprising three or more substantially parallel cutting members (28a-d) disposed between a leading longitudinal side (24) and a trailing longitudinal side (25) of the razor cartridge in a shaving direction (S) of the razor cartridge. Each of the cutting members (28a-d) comprises a blade support (32) comprising a blade mounting portion (71) disposed on an inner surface (66) of the respective blade support that, in use, faces away from a shaving plane (SH), and a blade (33) attached to the blade mounting portion (71). The cutting members (28a-d) are disposed to define a plurality of inter-blade spans (40, 41, 42) between cutting edges (30) of the blades. A leading inter-blade span (40) that is closer to the leading longitudinal side (24) of the razor cartridge than a trailing inter-blade span (42) is greater than the trailing inter-blade span (42) that is closer to the trailing longitudinal side (25) of the razor cartridge than the leading inter-blade span.
