Abstract (en)
[origin: EP3744659A1] A container 100 for housing household tissue paper and comprising: a container main body 1 having household tissue paper P housed therein and having a retrieval hole 112 from which the household tissue paper P is retrieved; and an opening/closing lid 2 rotatably attached to the container main body 1 and blocking the retrieval hole 112. The container main body 1: has at least part thereof formed using an elastic material; comprises a locking means 114 that locks the opening/closing lid 2 in a closed state and is capable of opening the opening/closing lid 2 by releasing the lock; and comprises an impelling means 3 that is integrally formed, using elastic material, with a section formed by the elastic material of the container main body 1 and impels the opening/closing lid 2 in the opening direction. As a result, a housing container for household tissue paper can be provided that has a simple opening action for the opening/closing lid and suppresses reduction in productivity.
