Abstract (en)
Disclosed is a faucet, comprising a faucet body (1), a first water outlet end device (2) connected to the faucet body (1) by means of a water outlet pipe (21), a support part (3), and a second water outlet end device (4). The first water outlet end device (2) is provided with a first water outlet portion (22). The support part (3) is mounted and connected to the faucet body (1). The second water outlet end device (4) is mounted and connected to the support part (3). The second water outlet end device (4) is provided with at least two second water outlet portions (41). The first water outlet portion (22) is movable with respect to the faucet body (1). By means of at least the relative movement of the first water outlet portion (22), the first water outlet portion (22) is selected to directly supply water or water from the water outlet pipe (21) flows through the first water outlet end device (2) and is finally supplied by a certain selected second water outlet portion (41). The faucet is compact in structure, convenient to use, low in costs, and easy to operate.
