Abstract (en)

[origin: WO2019145114A1] The invention relates to a filament having a main body composed of a first plastic material. The main body extends along a longitudinal axis, wherein its cross section has a radially inner base section and a plurality of projections which protrude radially to the outside from the base section. The projections are integrally formed with the base section. In this case, provision is made for at least one of the projections to be fitted with a head part at its radially outer end. The head part is composed of a second plastic material which is different from the first plastic material of the main body.
