Abstract (en)

[origin: WO2019149442A1] The invention relates to an arrangement for hermetically securely docking a protective suit (1) to a connecting hose (10) and for allowing the wearer of the protective suit (1) to leave a contaminated inner region (4), which arrangement has a passage hose (8) which adjoins a passage opening in the outer region (5), it being possible to connect the inner wall of said passage hose to the outer wall of the connecting hose (10) in order to form a closable pass-through opening (6) in the outer region (5). An exit tunnel (13) adjoins the passage opening (30) out of the inner region (4), wherein at least that section (31) of said exit tunnel which is opposite the passage opening (30) is composed of a flexible material, and the passage hose (8) adjoins the end section (31) of the exit tunnel (13) in a hermetically sealed manner.
