Abstract (en)

[origin: WO2019149464A1] The present invention relates in particular to an adapter part (10) for adapting a coupling head (1) of a first type to a coupling head of a second type. The coupling head (1) of the first type comprises a coupling-head body (2), a hinged-jaws mechanism (6), which can be rotated horizontally, about a vertical bolt (5), relative to the coupling-head body (2), between a position ready for coupling and a closure position, and a closure mechanism for locking or unlocking the hinged-jaws mechanism (6) in the closure position thereof as required. The adapter part (10) according to the invention is designed so as to be releasably connected to the coupling head (1) of the first type and in particular to the coupling-head body (2) of the coupling head (1) of the first type, rather than being coupled to the hinged-jaws mechanism (6) of the coupling head (1) of the first type to be adapted.
