Abstract (en)

[origin: WO2019149456A1] The invention relates to a rail vehicle (2) having a vehicle frame (12) which is movable on rails (7) of a track (1) in a manner supported on bogies (4), the rail vehicle comprising a first measurement platform (5) with a first inertial measurement system (9) for detecting a track profile. A second measurement platform (14) is arranged on the rail vehicle (2) and comprises a second inertial measurement system (15) and at least one sensor device (17) for detecting surface points (P) of a track section (18). The movement of the sensor device (17) in three-dimensional space is detected in a simple way using the second measurement platform (14) and the second inertial measurement system (15).
