Abstract (en)

[origin: WO2019147150A1] The present invention relates to a tubular profile (1) closer (3), in particular a tubular handrail closer, comprising a retaining body (311) fitted to the radially internal surface of the tubular profile (1) and provided with fastening means apt for blocking the closer (3) inside the tubular profile (1). In order to provide a closer (3) featuring a simple and economic construction enabling simple, solid and aesthetic closing a handrail or handle opening, said closer (3) comprises at least two clamping segments (31) made of plastic and defining said retaining body (311), wherein a lid (32), preferably made of metal, is seated between said clamping segments (31). Preferably said fastening means have a form of, preferably, circumferential clamping projections (313) that are deformed during positioning said closer (3) in its assembled state in said tubular profile (1).
