Abstract (en)
[origin: WO2019149392A1] A packaging assembly (100) for a cutting tool (120) is provided. The cutting tool (120) has a first lever (122) defining a first cutting edge (124), and a second lever (130) defining a second cutting edge (132). The packaging assembly (100) includes a base plate having a cavity (104) such that a first pivot pin is received inside the cavity (104). The packaging assembly (100) includes a primary cover member (106) coupled to the base plate (102) to restrain the cutting tool (120) over the base plate (102). A pivotally hinged section pivots between an open position and a closed position allowing the cutting tool (120) to be inserted into the packaging assembly (100). The packaging assembly (100) is characterized in that the packaging assembly (100) further includes a blade cover member (140) fixedly coupled to the first cutting edge (124) of the cutting tool (120) such that the blade cover member (140) covers a space between the first cutting edge (124) and the second cutting edge (132).
