Abstract (en)

[origin: WO2019186003A1] The invention relates to a device (1) for winding up or unwinding a plurality of reels (2), each reel (2) being formed by a wound strip. According to the invention, the device comprises a bar (3) comprising a shaft (4) about which a plurality of sections (5) are mounted in a manner spaced apart from one another, each section (5) being intended to support a reel (2), the sections (5) are mounted so as to be free to rotate in one and the same direction in order for it to be possible to unwind the reels (2) one by one, and are able to be driven in rotation by the shaft (4) in an opposite direction in order for it to be possible to simultaneously wind up all of the strips on the reels (2).
