Abstract (en)
[origin: WO2019186302A1] A toilet (1) comprising a collection body (2) to collect physiological function excretions, having: an upper opening (4), a lower opening (6), an annular body (5) which externally delimits the collection body (2) at the upper opening (4), an annular channel (7) present in the annular body (5) and provided with an annular slot (8) facing the inner volume (9) of the collection body (2), and water supply means (10) in the annular channel (7) to wash the inner surface (11) of the collection body (2). The annular body (5) comprises an upper ring (12) as a seat for the person using the toilet (1) and a lower ring (14) perimetrically fastened to the outside of the collection body (2) and spaced from the perimeter edge (15) which delimits the upper opening (4), suited to define a perimeter band (16) of the collection body (2) comprised between the lower ring (14) and the perimeter edge (15), inserted in the annular slot (8) and housed in the annular channel (7). The annular channel (7) comprises a concave area (7a) made in the upper ring (12) and delimited by the lower ring (14), the upper ring (12) and the lower ring (14) are removably joined together by connecting means (17) to define the annular slot (8).
