Abstract (en)

[origin: WO2019145568A1] The invention relates to a connection device (1) for a toilet bowl (2), comprising a bearing element (4), which can be arranged in a receiving area (3) of the toilet bowl (2) and can be rigidly connected to the toilet bowl (2), and a support assembly (5) with a first bearing point (6), in which a flush pipe (7) is mounted, and a second bearing point (8), in which an outlet pipe (9) is mounted, wherein the flush pipe (7) can be connected to a flush water line (10) arranged in a stationary manner on-site and to a flush water inlet (11) arranged on the toilet bowl, and the outlet pipe (9) can be connected to a wastewater line (12) arranged in a stationary manner on-site and to a wastewater outlet (13) arranged on the toilet bowl. The support assembly (5) can be connected to a securing element (21) rigidly arranged on-site in a mechanically fixed manner, and the support assembly (5) and the bearing element (4) can be moved relative to each other in the direction of an adjustment movement (E) when adjusting the height position of the toilet bowl (2). The flush pipe (7) and the outlet pipe (9) each has at least one respective compensation portion (14, 15) by means of which an adjustment offset (V) between the flush water line (10) or the wastewater line (12) arranged in a stationary manner on-site and the flush water inlet (11) or the wastewater outlet (13) arranged on the toilet bowl can be compensated for, said offset resulting in the event of an adjustment movement (E) between the support assembly (5) and the bearing element (4).
