Abstract (en)
[origin: WO2019149410A1] The invention relates to an elongated strip lighting system (1), comprising a U-shaped carrier profile (2), a first coupling region (3) between the base wall (20) of the carrier profile (2) and a second coupling region (4), a power supply unit (5) in the receiving area (A) of the carrier profile (2), a strip lighting lamp (6) electrically contacting the power supply unit (5) and detachably mechanically coupled to the second coupling region (4), and an electrical or electronic unit (7) having a functional region (73) and an operating region (74), wherein the functional region (73) is arranged next to the strip lighting lamp (6) and the operating region (74) extends between the strip lighting lamp (6) and the base wall (20), is electrically contacting the power supply unit (5), and is detachably mechanically coupled to the first coupling region (3). Alternatively, each of the coupling regions (3, 4) is provided on a respective one of the side walls (21, 22) of the carrier profile (2) for mechanically detachably coupling the strip lighting lamp (6) and the unit (7).
