Abstract (en)
[origin: WO2019149511A1] Arrangement (14, 15) with a cooking appliance component (16) and a rail pull-out device (17) for a cooking material support, having a first rail (21) which has a securing device (22) for securing the rail pull-out device (17) on the cooking appliance component (16), and having a second rail (24) which is designed to receive the cooking material support, wherein the rails (21, 24) can be moved relative to one another, and the securing device (22) has a spring element (25) which forms a resilient stop for the first rail (21) on the cooking appliance component (16), and by virtue of the spring element (25) it is possible to perform a damped relative movement of the rail pull-out device (17) relative to the cooking appliance component (16) in the relative movement direction of the two rails (21, 24) relative to one another when secured to the cooking appliance component (16), wherein the relative movement is bounded between a basic position and a removal position, a control element (28), for releasing the securing device (22) from the cooking appliance component (16), being arranged on the first rail (21).
