Abstract (en)
[origin: WO2019211065A1] The invention relates to an emergency reporting device in a motor vehicle (K) for manually and/or automatically reporting an emergency to a report center. A hands-free communication apparatus, consisting of at least one microphone (3) and at least one loudspeaker (6), can be used to communicate with the report center. The microphone (3) is arranged in a first vertical plane (E1) extending perpendicularly to a longitudinal direction (L) of the motor vehicle (K), and the loudspeaker (6) is arranged separate from the microphone (3) in a second vertical plane (E2) extending perpendicularly to the longitudinal direction (L) of the motor vehicle (K). Furthermore, the microphone (3) and the loudspeaker (6) are additionally arranged in a central region of the motor vehicle (K) containing a vertical longitudinal center plane (E3). According to the invention it is proposed that the first plane (E1), viewed in a usual direction of travel (F) of the motor vehicle (K), is located behind the second plane (E2), and the second plane (E2), viewed counter to the direction of travel (F), is arranged in the region of the head of a vehicle driver (P1).
