Abstract (en)  
[origin: US2020375432A1] A dish rack for dishwashers, with side walls and a grid-shaped rack base together surrounding a rack interior space of the dish rack, and the rack base and/or the side walls having standing surfaces that end in a standing plane of the dish rack. In at least one of the side walls at least one washing liquid deflecting surface is formed for deflecting a washing liquid jet, which penetrates the standing plane, into the rack interior space. The washing liquid deflecting surface extends between inner and outer wall portions of the side wall. The washing liquid deflecting surface has at least one deflecting surface region which, as seen in a sectional plane parallel to the standing plane, is arranged at an obtuse angle relative to an inner surface of the inner wall portion, this inner surface facing the rack interior space, and the deflecting surface region has a height extent of at least 5 mm in a vertical direction normal to the standing plane.
