Abstract (en)

[origin: EP3747808A1] A device for feeding blanks (100) to a packing machine, comprising feed means (2) for feeding a stack (P) of blanks (100) and at least one stop element (4) configured to allow or prevent picking up the front blank (100) of the stack (P), wherein the feed means (2) comprise at least one compensating belt (6) having an upper section (7) running parallel to the feed direction (A) of the stack (P) of blanks (100) and defining a bottom support of a predefined portion of the stack (P) of blanks (100) and wherein the compensating belt (6) is a suction belt connected to a pneumatic suction source and is associated with adjustment means configured to adjust the feed speed of the compensating belt (6) in such a way as to vary the thrust on the stop element (4).
