Abstract (en)
An accessory device for a Medium Voltage contactor, comprises a latching element 2 movable along an insertion/withdrawal direction between a first operating position in which a movable contact of the contactor is latched and a second resting position in which the movable contact is released. The latching element 2 is provided with means 3 for reducing friction comprising a first 31 and a second roller 32, a supporting structure 21 for the first and second rollers, and a first 41 and a second 42 pin housed in the supporting structure 21 onto which the first 31 and second 32 rollers are respectively mounted free to rotate around their longitudinal axis. First retaining means 5 lock the first and second pins along the direction of the longitudinal axis, and second retaining means 6 block the rotation of the first and second pin with respect to the supporting structure 21.
