Abstract (en)
[origin: EP3748787A1] A wiring device and an air conditioner are provided in the invention, which relate to the field of air conditioning. A wiring device is used to be connected to an electronic control box. The wiring device includes a first terminal assembly and a second terminal assembly. The first terminal assembly includes a first wiring terminal and a first sliding structure, wherein the first wiring terminal is used to be connected to the electronic control box, and the first sliding structure is connected to a side surface of the first wiring terminal. The second terminal assembly includes a second wiring terminal and a first guiding structure, wherein the first guiding structure is connected to a side surface of the second wiring terminal. Both the first wiring terminal and the second wiring terminal are opened with a plurality of wiring holes extending in a first direction. The first sliding structure is connected to the first guiding structure, and the first sliding structure moves relative to the first guiding structure in the first direction. An air conditioner using the above wiring device is provided. The wiring device and the air conditioner of the invention are convenient for the lead of the electronic control box, and are convenient for mounting and disassembly.
