Abstract (en)
[origin: WO2019154458A1] The invention relates to a stamping and scoring tool, particularly for producing folding box blanks, comprising a carrier plate in which there is at least one recess for receiving at least one stamping and/or scoring rule, in the form of a strip steel die. The aim of the invention is to provide a stamping and scoring tool that allows constant adjustment of folding box blanks and increases the dimensional consistency of the carrier plate. To that end the invention proposes at least one elastic holding element for clamping and detachably holding the stamping and/or scoring rule, said holding element being insertable into the recess and/or into an additional recess of the carrier plate and being detachably held therein.
