Abstract (en)

[origin: WO2019155138A1] The invention concerns a motor vehicle (1) comprising a light signalling device (2) arranged inside the vehicle (1), behind the windscreen (3) of the vehicle (1), said device (2) comprising a housing supporting at least one light source capable of projecting at least one first light beam (F1) towards the outside of the vehicle (1) in first directions (D1) in order to signal, to people outside said vehicle (1), a defined driving mode of said vehicle (1), characterised in that the housing comprises at least one first output opening for the first light beam (F1) and at least one second output opening for a second light beam in second directions, different to the first directions, in order to signal to the passengers of the vehicle (1) that the latter is driving in the defined driving mode.
