Abstract (en)
[origin: WO2019152053A1] A handle (200) includes a strap (202), a first boss component (204), and a second boss component (206). The strap has a first end (208) and an opposing second end (209). The first boss component is positioned at the first end of the strap and has a first ledge (218) that extends in a first ledge direction. The second boss component is positioned at the second end of the strap and has a second ledge that extends in a second ledge direction. The first boss component and the second boss component are configured to couple to a first can such that when the first can is nested within a second can the first ledge and the second ledge lie on top of an upper contact surface (106') of the second can such that the first ledge direction and the second ledge direction are substantially parallel to the upper contact surface.
