Abstract (en)

[origin: WO2019158136A1] The exterior shading system (1) comprises an exterior shading system (1) frame (3) located on the exterior side of a roof window (2) and a set (5) of shading lamellae (4), wherein the frame (3) of the exterior outer shading system (1) carries guiding elements (6) for determining the position of the lamellae (4) and their movement, these guiding elements (6) being arranged so that at all positions of the set (5) of lamellae (4), wherein the set (5) of lamellae (4) at least partially shades the roof window (2), an air gap (7) is provided between the set (5) of lamellae (4) and a glazing unit (2.1) of the roof window (2), having at least two vents (8.1, 8.2) to ventilate this air gap (7). It includes at least one Peltier cell (10), at least one photovoltaic cell (9) and at least one sensor (22.1, 22.2) of climatic variables, these elements being connected to a central unit (11) including a power supply unit (12) with an accumulator and an electronic control unit (13) for storing and/or controlled use of generated electric energy.
