Abstract (en)  
An electronic cigarette includes a housing assembly, a cartridge, a control circuitry and a push actuating arrangement. The push actuating arrangement includes an atomizer movably supported in the housing assembly, a mouth piece connected to the atomizer and movably supported in the housing assembly, and an actuating member movably mounted on the housing assembly to operate between an idle position and an actuated position. In the idle position, the actuating member is moved to retain the atomizer and the mouth piece in the housing assembly. In the actuated position, the actuating member is driven to move with respect to the housing assembly so as to expose the mouth piece to an exterior of the housing assembly for user's smoking.
