Abstract (en)
[origin: EP3750463A1] A single-brush rotary-orbital machine (1) comprising: a frame (2) comprising a rear drag handle (21) for providing control of the machine (1), moving means (22) of the machine (1) and a front portion (23) having a passage opening (231); a base (3) for supporting a work tool (4), situated below the front portion (23); a motor (5) configured to actuate the work tool (4) with a rotary-orbital motion, the motor extending through the passage opening (231) of the front portion (23) of the frame (2) and being supported by the base (3); wherein the front portion (23) of the frame (2) and the base (3) are connected to each other in a direction of connection (X-X) by elastic damping means (6) which allow the front portion (3) of the frame (2) and the base (3) to move relative to each other in the direction of connection (X-X).
