Abstract (en)

[origin: US2019246720A1] A method and system for creating a clothing enhanced to more readily retain a particular shape, for example in order to create a more flattering look for the wearer. In an exemplary embodiment, an article of clothing may be treated with heat applied transfers which may stiffen the clothing in particular areas in order to provide support, contouring, and lift; eligible clothing may include, for example, jeans, which may be enhanced in order to provide a more pronounced and flattering rear portion for the user. Such a method and system may be combined with other methods and systems, for example a method and system for creating a clothing with enhanced durability using a heat transfer, in order to achieve a resulting article that may have desirable properties, such as breathability, flexibility, stiffness, or durability, in addition to its ability to retain a particular shape more readily.
