Abstract (en)
[origin: WO2019157546A1] The invention relates to a stamp (1) with a swivellable printing unit (4), comprising at least one upper part (2), a lower part (3) and a printing unit (4) preferably having a stamp plate (5). A receiving device (6) for an exchangeable ink pad (7) is arranged in the lower part (3). The printing unit (4) can be adjusted in the vertical direction from a resting position (8), in which preferably the stamp plate (5) rests on the ink pad (7), into a stamping position (10) for creating a stamp imprint (9) of the stamp plate (5), wherein the printing unit (4) can be rotated by approx. 180° via a turning mechanism (11). A turning opening (14) for the printing unit (4) arranged in the lower part (3) is arranged on a rear side (15) of the upper part (2). A respective grip opening (23, 24) is arranged on both side surfaces (21, 22) of the upper part (2), for gripping through to the lower part (3), in particular to grip elements (29, 30) of an inserted ink pad (7), which extends to the rear side (15) of the upper part (2) and feeds into a removal opening (25) running over the entire length (26) of the rear side (15), such that the two lateral grip openings (23, 24) on the side faces (21, 22) are connected to one another by the removal opening (25) on the rear side (15).
