Abstract (en)  
[origin: WO2019159163A1] A method of no-bath plasma electrolytic oxidation of a workpiece made of a valve metal or an alloy thereof is disclosed. The aforesaid method comprises the steps of: (a) deploying the workpiece to form a first electrode; (b) providing an applicator of an electrolyte medium to form a second electrode; (c) forming a working gap between the first and second electrodes; (d) applying a voltage between the first and second electrodes; (e) delivering the electrolyte medium into the working gap between the first and second electrodes. The electrolyte medium selected from the group consisting of a foam electrolyte medium, a gel electrolyte medium, a pasteous electrolyte medium and any combination thereof.
