Abstract (en)

[origin: WO2019158839A1] The present invention relates to a system for indicating the crossing of a loudness threshold of a source, comprising an acoustic antenna, at least one image sensor and an electronic circuit which locates at least one sound source from the signals output by the acoustic antenna (100), said system being characterised in that the circuit controls the orientation and/or activation of the time-stamped recording of the images provided by the sound sensor.
