Abstract (en)

[origin: WO2019158715A1] The invention relates to a device and a method for identifying a user, including a visually impaired user, said device including at least one terminal comprising at least one touchscreen with a set of raised patterns superimposed on a virtual keyboard and displaying information linked to at least one transaction, a device for reading a chip card with and/or without contact, a processor and a memory containing a set of modules and/or algorithms for implementing the method comprising at least the activation of a "low vision" mode for visually impaired users by a double-tap gesture on the screen of the terminal, the search for the centre of a virtual keyboard on the touchscreen on which a raised pattern with a point is located, the determination of the positions of the other keys of the virtual keyboard from said central key, the choice and storing of a desired key by separating the finger from the touchscreen at the position of said desired key, the confirmation of the choice of key carried out by a double-tap gesture anywhere on the touchscreen, and the confirmation of the code/PIN by a double-tap gesture anywhere on the touchscreen.
