Abstract (en)
[origin: WO2019192792A1] The invention relates to an electrical power transmission device having a first control panel (6, 7, 8, 9, 10, 11) and a second control panel (6, 7, 8, 9, 10, 11). The control panels (6, 7, 8, 9, 10, 11) are interconnected by way of a first busbar strand (1), wherein a first housing (4) and a second housing (5) are arranged in the first busbar strand (1). The first housing (4) and the second housing (5) each have interfaces for connection to further assemblies, in particular housings (4, 5). In this case, the distance between the interfaces (17) of the first housing (4) is different from the distance between the interfaces (17) of the second housing (5).
