Abstract (en)

The present invention relates to an improved brassiere 10. The brassiere 10 comprises first and second cups 18, 20 and a bridge 22 between the first and second cups. Each of the first and second cups 18, 20 extends in a first direction towards an apex of the cup. The bridge 22 has a first surface which, in use, is directed away from the body of a wearer of the brassiere. The bridge 22 comprises a protrusion 24 which is integral with the bridge. The protrusion 24 extends away from the first surface in a second direction opposite the first direction whereby the protrusion is received between the breasts when the brassiere is worn.
