Abstract (en)

Personalized doll with features adjusted to the image of a real model and its manufacturing process that includes (i) the capture of a profile image and another face image of the person or model; (ii) the adjustment of the factions of a digital three-dimensional base model of a doll's face to the profile and front images by means of a computer program adapted to such use; (iii) and the subsequent production of the doll's face based on the three-dimensional model adjusted by three-dimensional printing. The manufacturing process of the doll ends with the decoration and implantation of the remaining elements through the traditional process (artisanal). An executable computer program adapted to adjust the features of a digital three-dimensional base model of a wrist face and produce a file or instructions to allow three-dimensional printing using the digital three-dimensional model is also claimed.
