Abstract (en)

The present invention includes: a side sill 4; a wheel house 90 comprising a front lower portion 92a raising from a rear portion of the side sill 4; a center pillar 5 extending in an upward direction from an intermediate portion of the side sill 4; and a door 6 arranged to open/close an opening 2r formed by side sill 4 and the center pillar 5. An impact bar 63 is provided to the door 6. The impact bar is arranged such that a rear portion 63r of the impact bar 63 overlaps the rear portion of the side sill 4 in a vehicle side view when the door 6 is closed. The side sill 4 includes a side sill reinforcing member 30U reinforcing bending rigidity against a load directed to a vehicle width inner side. The side sill reinforcing portion 30U is at least provided in an intermediate portion (4Ra) of the side sill where the center pillar 5 is located and the rear portion of the side sill 4 in a longitudinal direction of the side sill 4.
