Abstract (en)
[origin: CN112095319A] The invention relates to an ironing device comprising an ironing plate (5) carried by a support. The support allows the plate (5) to be arranged according to a plurality of directions in which the plate (5) acts as a support for the laundry to be ironed in order to allow the laundry to be treated by means of an ironing and/or ironing tool. The support comprises a first articulation device (7) and a second articulation device (4), wherein the first hinge device enables the plate (5) to pivot around a horizontal first pivot axis (70), the second hinge device enables the plate (5) to pivot around a second pivot axis (42) parallel to the first pivot axis (70), and the pivoting of the plate (5) around the first pivot axis (70) can be carried out independently of the pivoting of the plate (5) around the second pivot axis (42).
