Abstract (en)
[origin: WO2019160645A1] A method and system for remote animal surveillance and distress monitoring includes detecting biometric and behavioral parameters of the animal, identifying novel events based on comparison of detected parameters to predefined parameter values and qualifications; determining whether parameter values or a composite parameter value exceeds a predefined value threshold indicative of possible distress in the animal; and notifying remote caretakers of possible distress in the animal based on the composite value exceeding the predefined value threshold.
