Abstract (en)
[origin: WO2019162587A1] A motor vehicle (1) comprising means for detecting irregularities on the road travelled by said vehicle; characterised in that the means for detecting irregularities comprise sensors of the position, speed and/or acceleration of a characteristic point (E, F, G, H) of each of the shock-absorbing devices of the vehicle, the vehicle also comprising a processing unit (10) for processing data detected by the detection means, the processing unit (10) being programmed in order to determine, at any time, a geometric surface characteristic of the position, speed and/or acceleration of the characteristic points, the processing unit (10) also being programmed to determine a piece of information on irregularity of the road when said geometric surface varies, over time, beyond a predetermined threshold. The invention also relates to a method and a system for identifying irregularities of the road.
