Abstract (en)
[origin: WO2019161423A1] The invention relates to a stand-up paddle comprising a shaft (3) arranged between a paddle blade (1) and a handle part (2). In order to design the stand-up paddle such that users, in particular inexperienced users of stand-up paddle boards can strike the paddle without risking to lose balance, the handle part (2) is connected to the end of the shaft (3) near the paddle blade (1) via a tensile-resistant, flexurally elastic connecting element (4).
