Abstract (en)
[origin: WO2019162818A1] A slide-open package (1) for articles, comprising: at least one article; an inner shell (2) comprising an extraction opening (20) for taking out the article; an outer shell (3) comprising an opening (30) through which the inner shell (2) can slide between an open position (A), allowing access to the article through the extraction opening (20), and a closed position (B), preventing access to the article; an article support wall (4) on which the article is fixed; a connecting element (5) that connects the outer shell (3) and the inner shell (2), that is connected to the support wall (4) and that is foldable in such a way that, when the inner shell (2) is moved from the closed position (B) to the open position (A), the connecting element (5) is moved from a gathered position (C) to an extended position (D) which causes the support wall (4) to rotate and the article to come out through the extraction opening (20).
