Abstract (en)  
[origin: CA3091317A1] The invention relates to a junction plate (4) for a junction device (1) for a conveyor belt (2) intended to connect two ends (3) of a conveyor belt (2), the junction device (1) being of the type comprising at least two junction plates (4) secured together with the ends (3) of the conveyor belt (2) by securing means (5) each comprising a head (5a) and an anchoring section (5b); the junction plate (4) being noteworthy in that it comprises first interfaces (6) for cooperating with the heads (5a) of the securing means (5) and second interfaces (7) for cooperating with the anchoring sections (5b) of the securing means (5), the first and second interfaces (6, 7) being arranged so as to form a repeating succession of patterns (8), and in that each pattern (8) has the same number of first interfaces (6) as second interfaces (7).
