Abstract (en)

[origin: WO2019162897A1] The invention relates to a reloading device (6) and a turret comprising such a device (6), the device comprising a plurality of support tubes (7) intended to hold ammunition (100), said support tubes (7) being rigidly connected to each other and arranged so as to form a cylinder portion, the device (6) comprising a pushing carriage (8) which is translatable along the longitudinal axis (X) of the cylinder portion using a motor means (9), the carriage comprising as many connecting arms as support tubes (7), each arm being guided along a slot in each tube and having a pushing surface capable of sliding into the associated support tube (7), all the pushing surfaces (10) being intended to simultaneously push all the ammunition (100) out of the support tubes (7) towards the chambers of the barrel (3).
