Abstract (en)
[origin: EP3756509A1] Stabilizing device (1) for furniture, to be arranged between a support of the furniture and a surface. The stabilizing device (1) comprises a cylinder (10) which walls (11, 12, 13) define a closed reservoir (15), a piston (20), having a piston head (21) arranged in the cylinder (10) and a piston rod (22) having a first end (22a) connected to the piston head (21) and a second end (22b) for connection to the support of the furniture, the piston head (21) being movable between first and second end walls (11, 12) of the cylinder (10). The stabilizing device (1) further comprises a fluid (40) arranged in the reservoir (15), a spring (50) arranged between the first end wall (11) and the piston head (21), wherein a gap (60) is arranged between at least a part of a circumference (23) of the piston head (21) and a sidewall (13) of the cylinder (10), such as the fluid (40) may flow past the piston head (21) when it moves within the reservoir (15).
