Abstract (en)
[origin: CN112127120A] The invention relates to an operating method and a laundry treatment apparatus. The laundry treatment apparatus has a lye container with a discharge opening and an inlet element, a pump device, a discharge line connecting the discharge opening to the pump device, a pump-out line connecting the pump device to an outer region of the laundry treatment apparatus, and a circulation pumping line connecting the pump device to the inlet element. The pump device has a first pump, which pumps the washing liquid from the lye container via the pump-out line and from the laundry treatment apparatus, and a second pump, which feeds the washing liquid from the lye container again via the circulation pumping line and via the inlet element. One pump is activated in a first period of time to pump the washing liquid into the pump-out line or a liquid level in the circulation pumping line. The other pump is activated in the second time period, and the washing liquid is pumped from the pumping-out line or the circulating pumping line to the liquid material level in the other line corresponding to the pumping-out line or the circulating pumping line.
