Abstract (en)
[origin: CN112127734A] The invention relates to a drive system for a wing of a door or a window, in particular for a wing of a door or a window of a smoke and heat discharge device. The drive system comprises: an actuating element for a locking device for locking the wing on a frame of the door or window, the locking device being integrated into the wing or the frame; and a drive coupled to the wing, the frame and the actuation element such that the wing is movable between an open position and a closed position by the drive, and the locking device is adjustable between an unlocked position and a locked position by the actuation element when the leaf is closed.
