Abstract (en)

An Organic Rankine Cycle system (1) is provided, the system (1) comprising, arranged one behind the other in the direction of flow of an organic fluid in an Organic Rankine Cycle (2), a turbine (3), a regenerator (4) with a first side (5), a condenser (6), a feed pump (7), the regenerator (4) with a second side (8) and a heat recovery unit (9) with first heating surfaces (10), wherein the Organic Rankine Cycle (2) branches out between the condenser (6) and the regenerator (4) and reunites between the regenerator (4) and the heat recovery unit (9), forming first and second branches (11, 12), wherein the first branch (11) includes the regenerator (4) and the second branch (12) includes a second heating surface (13) arranged in the heat recovery unit (9) behind the first heating surfaces (10) in the direction of flow of a flue gas through the heat recovery unit (9). is provided. Furthermore, a method for operating an Organic Rankine Cycle system (1) is provided.
