Abstract (en)
An electronic musical instrument includes: means for inputting, based on a user operation on at least one operation element (361), first waveform data to a first wave generator (3731) and second waveform data to a second wave generator (3741), wherein the second waveform data indicates positive/negative inversion data of a portion of the first waveform data exceeding a certain clipping level, so as to cause the first wave generator (3731) to output first output data (373) and the second wave generator (3741) to output second output data (374); and means for generating addition data based on the first output data (373) output from the first wave generator (3731) and the second output data (374) output from the second wave generator (3741).
