Abstract (en)

[origin: EP3758035A1] A single-phase diverter switch (100) for a column-type on-load tap changer comprises an insulating carrier plate (150) having a first carrier section (151) substantially semicircular in cross-section, and having a second carrier section (152) substantially semicircular in cross-section and abutting the first carrier section (151); an interrupter arrangement disposed on the first carrier section (151) of the insulating carrier plate (150), the interrupter arrangement including a first main interrupter (110), a second main interrupter (111) and a transition phase interrupter (112); and a disconnecter arrangement disposed on the second carrier section (152) of the insulating carrier plate (150), the disconnecter arrangement including a first disconnecter (120) electrically connected to the first main vacuum interrupter (110) and a second disconnecter (121) electrically connected to the second main vacuum interrupter (111). Respective connection states of the interrupter arrangement and of the disconnecter arrangement are controllable according to a predetermined switching sequence.
